Materials and methods

Data acquisition: recording roadside videos using a smart phone

Roadside videos were recorded using a smart phone (Samsung Galaxy S10) attached the exterior of a vehicle using a magnetic mount (Fig 1). Videos were recorded using the free OpenCamera app (url) and location was recorded using the free GPSlogger app (url). Details for mounting the smart phone and setting app parameters are available in S1.

Digital image analysis: detecting CRB damage in video frames

Object detector development

Data analysis workflow

Visualization: mapping CRB damage

An interactive web map for each survey is generated using QGIS version 3.14 using the **qgis2web** plugin. QGIS reads survey data directly from a SpatiaLite database. The database and a Python script for generating maps are available in a public repository, <https://github.com/aubreymoore/Guam-CRB-damage-map>. The most current web map is publicly available on an HTML page stored in this repository, <https://aubreymoore.github.io/Guam-CRB-damage-map/>.
